NGUYEN TAN HO

RESEARCH ENGINEER IN DEEP LEARNING AND COMPUTER VISION

Home : Nishitokyo, Tokyo

Email : ho.nguyen.4e@stu.hosei.ac.jp

OBJECTIVE

I am looking to establish long-term employment in a friendly environment. I am passionate about solving real-world problems through the application of machine learning techniques. I like to learn new things and try to keep growing by challenging myself.

SKILLS

Programming languages, tools and research frameworks : Python, Matlab, Pytorch, Tensorflow, Linux.

Web-based Application: Django, HTML, CSS, JavaScript, Ajax, streamlit.

Languages : English (Working Proficiency), Vietnamese (Native).

EDUCATION

HOSEI UNIVERSITY, JAPAN
Master's Degree, Applied Informatic
GPA : 3.51/4.00
Sep 2019 - Present

UNIVERSITY OF INFORMATION TECHNOLOGY, VIETNAM
Bachelor's Degree, Computer Science
Undergraduate Thesis Grade: 9.8/10
Sep 2014 - Jun 2019

Course Certificate (coursera.org)

- Neural Networks and Deep Learning
- Convolutional Neural Networks

EXPERIENCE

RESEARCH ASSISTANT | Nov 2020 - Present
Research Center for Computing and Multimedia Studies, Hosei University, Japan

- Survey on Learning Analytics in many educational institutions worldwide. Our findings were presented at international conference **IEEE ICALT 2021.**
- Design and develop a computer vision-based application using student's behavior features including emotion, eyegaze to detect engagement level of students in online class.(view demo in Portfolios).

RESEARCH ASSISTANT | Sep 2019 - July 2021
Intelligent Media Processing Laboratory, Hosei University, Japan

- Process data, training, and evaluate the performance of Convolutional Neural Network-based algorithms for video deblurring.
- Designed and developed a framework accelerating the video deblurring process by utilizing the coded information from the encoder. This work was accepted at **IEEE MMSP 2021**.
- Working as teaching assistant and tutor for Hosei classes.

RESEARCH ASSISTANT | Jun 2018 - Jan 2019
Multimedia Communications Laboratory, University of Information Technology, Vietnam

- Developed a computer vision-based application that enables seeking someone by using their face and their human attribution information in a surveillance camera network. This work scored 9.8 for a bachelor thesis and reached the top 20 teams in Creative ideas for smart city - Binh Duong Competition 2018, Vietnam. (view demo in Portfolios).

PUBLICATION

1. "SpeedDeblur: A Framework to speed up CNN-based Deblurring for HEVC compressed video, **IEEE MMSP 2021 (accepted)**
   ***Ho Tan Nguyen**, Chi Do-Kim Pham, Jinjia Zhou.*
2. "Briefing and Geovisualizing on International Practices of Learning Analytics in Higher Education", **IEEE ICALT 2021 (accepted)**
   *H. Ueda, **Ho Tan Nguyen**, B. Huyen, T. Thuy, H. Hatakeyama and H. Nehal.*
3. "Can Sakai Log Data Improve Learning Analytics? Findings from a on Preliminary Survey"**, Information Processing Society of Japan**
   *H. Nehal, **Ho Tan Nguyen**, B. Huyen, T. Thuy, H. Hatakeyama, H. Ueda.*
4. "Students' emotion extraction and visualization for engagement detection in online learning", **KES 2021 (accepted)**
   *H. Nehal, B. Huyen, T. Thuy, **Ho Tan Nguyen** ,Gökhan Akçapınar , H. Ueda.*
